

Coaxial valves in modular design

Absolute flexibility thanks to an angle fitting system

Design your individual manifold

Configure yourself quickly and easily Test our X-con product configurator

https://rsg.vercel.app/signin/

- Modular design with a clever angle fitting system
- Absolute flexibility
- DO IT YOURSELF quickly and easily configure yourself
- Direct- and externally controlled coaxial valves
- Simple integration of sensors and measurement technology

→ Save space and piping cost in your equipment

In three steps to your individual manifold

1. Define characteristics for the basis module

2. Define functions for each added module

3. Select the accessories

Ready!

Classic applications of the X-con manifold

X-con manifold as distributor. Fluid is distributed to several consumers via one inlet.

X-con manifold as collector. Fluids will be merged via several valves in the manifold.

Special solutions

If the configurator reaches its limits for your application, we will be happy to design the right solution for your application.

compact 10-times manifold

Integration of the pressure reducing valve into manifold
